PROFESSIONAL SUMMARY

Results-driven Frontend Developer with 4+ years of experience designing and delivering responsive, user-friendly web applications for the banking and fintech sector. Proficient in HTML5, CSS3, JavaScript, TypeScript, React JS, Angular, and PrimeNG. Experienced in integrating government APIs (UIDAI, eKYC, vKYC) and building secure digital onboarding platforms. Adapt at leveraging AI-powered tools to accelerate development workflows and improve code quality.

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript (ES6+), TypeScript, React JS, Angular, Angular Material, PrimeNG
Version Control	Git, Bitbucket
Project Tools	Jira, Confluence
API Integration	REST APIs, UIDAI (Aadhaar), eKYC, vKYC, PAN Validation, Payment Gateway
AI Tools	GitHub Copilot, ChatGPT, Claude AI, Cursor
Core Skills	Responsive Web Design, Scalable UI Architecture, Banking & Fintech Apps, Agile/Scrum

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Decimal Technologies Pvt Ltd

June 2021 – December 2025

- Engineered real-time analytics dashboards for 5+ banking clients using Angular and PrimeNG, visualising live transaction data via interactive charts and sortable data tables — directly improving decision-making speed for business stakeholders.
- Implemented end-to-end eKYC and vKYC onboarding workflows integrated with UIDAI Aadhaar APIs, enabling fully paperless digital identity verification and reducing average customer onboarding time by eliminating manual documentation steps.
- Drove Agile delivery as an active Scrum team member — managed sprint planning, task tracking, and release documentation in Jira and Confluence, consistently meeting 2-week sprint commitments across cross-functional teams (backend, QA, product).
- Accelerated development velocity by integrating GitHub Copilot and AI-assisted tooling (ChatGPT, Cursor) into daily workflows — reducing repetitive boilerplate, improving TypeScript code quality, and resolving complex async debugging challenges faster.
- Mentored and code-reviewed junior developers on Angular best practices including component architecture, lazy loading, reactive forms, and RxJS patterns — raising overall team code quality and reducing PR review cycles.
- Converted Figma design mockups into pixel-perfect, WCAG-accessible Angular components with full cross-browser compatibility (Chrome, Firefox, Safari, Edge), reducing design-dev handoff friction and rework cycles significantly.

KEY PROJECTS

Current Account – Sole Proprietorship & Individual Journey

Tech Stack: Angular, TypeScript, PrimeNG, UIDAI API, eKYC, vKYC, Payment Gateway, REST APIs

- ▶ Built an end-to-end current account opening platform for one of India's fastest-growing private banks, supporting thousands of daily applications with a high-availability, zero-downtime architecture.
- ▶ Implemented multi-step eKYC and vKYC onboarding flows with real-time Aadhaar OTP verification, face-match liveness checks, and document upload — fully replacing manual branch processes.
- ▶ Integrated a secure payment gateway module handling minimum balance collection and initial deposit transactions, with retry logic and failure-state UX to minimise user drop-offs.
- ▶ Designed a responsive, mobile-first Angular UI with dynamic form validation, multi-step progress indicators, and error-state recovery to ensure smooth experience across all device types.
- ▶ Coordinated with backend and QA teams to resolve API edge cases and implement end-to-end regression test scenarios before every production release.

Open Saving Account Platform

Tech Stack: Angular, TypeScript, Angular Material, PAN Validation API, Aadhaar API, vKYC, REST APIs

- ▶ Built a savings account onboarding platform for a leading national bank, digitising the complete customer acquisition funnel from lead capture through to account activation.
- ▶ Integrated PAN and Aadhaar validation APIs for KYC compliance, reducing fraudulent applications and ensuring data accuracy at the point of entry.
- ▶ Implemented vKYC video-based remote identity verification, allowing customers to complete verification from home and cutting physical branch visit volume substantially.
- ▶ Optimised Angular component lazy-loading and route guards to improve initial page load performance, contributing to improved funnel completion rates.
- ▶ Built reusable Angular form components and shared service modules subsequently adopted across multiple other banking projects within the team.

Bank Leads Management System

Tech Stack: Angular, TypeScript, PrimeNG, REST APIs, Role-based Access Control (RBAC)

- ▶ Developed a full-featured lead management platform enabling sales teams to capture, assign, track, and close bank product leads from a centralised dashboard.
- ▶ Implemented role-based access control (RBAC) with distinct views and permissions for branch managers, sales executives, and administrators.
- ▶ Built a lead status pipeline (New → In Progress → Converted / Lost) with follow-up scheduling and automated reminder alerts for overdue leads.
- ▶ Created performance monitoring dashboards showing individual and team-level conversion rates, helping managers identify bottlenecks and recognise top performers.
- ▶ Integrated REST APIs for real-time lead synchronisation with the bank's core CRM, ensuring zero data discrepancy between field teams and central records.

EDUCATION

Master of Computer Applications (MCA)

2018 – 2021

Dr. APJ Abdul Kalam Technical University, Lucknow

Bachelor of Computer Applications (BCA)

2015 – 2018

Chaudhary Charan Singh University, Meerut
