Portfolio: https://vivek-web-portfolio.netlify.app/

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 4+ years of experience designing and delivering responsive, user-friendly web applications for the banking, fintech, HR and logistics sectors. Proficient in HTML5, CSS3, JavaScript, TypeScript, React JS, Next.js, Angular and PrimeNG, with full stack experience in Node.js, PostgreSQL, Prisma ORM and Redis. Experienced in integrating government APIs (UIDAI, eKYC, vKYC) and building secure digital onboarding platforms. Adept at leveraging AI-powered tools (GitHub Copilot, Codex, Claude) to accelerate development workflows and improve code quality.

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript (ES6+), TypeScript, React JS, Next.js, Angular, Angular Material, PrimeNG
Backend	Node.js, Express, REST API design, JWT authentication, RBAC, Rate Limiting
Database & ORM	PostgreSQL, Prisma ORM, Redis, pgAdmin (schema design, queries, migrations)
Version Control	Git, GitHub, Bitbucket
Collaboration	Jira, Confluence, Slack
API Integration	REST APIs, UIDAI (Aadhaar), eKYC, vKYC, PAN Validation, Payment Gateway
AI Tools	GitHub Copilot, OpenAI Codex, Claude AI, ChatGPT, Cursor
Core Skills	Responsive Web Design, Scalable UI Architecture, Full Stack Development, Banking & Fintech, HRMS & Logistics, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full Stack Developer — IoT India Pvt Ltd *July 2026 – October 2026*

- Built an HRMS platform using Next.js (frontend), Node.js (REST APIs) and PostgreSQL, covering employee records, attendance, leave management and payroll workflows.
- Developed a logistics management application for order and shipment tracking, vehicle and driver assignment, and real-time delivery status dashboards.
- Designed PostgreSQL schemas, relations and indexes; managed queries and migrations using Prisma ORM and pgAdmin.
- Implemented secure JWT authentication and role-based access for Admin, HR, Manager and Employee users.
- Implemented Redis-based rate limiting on REST APIs to prevent abuse and protect the service from excessive requests.
- Followed Git branching and pull-request reviews, and coordinated daily with the team over Slack.
- Used GitHub Copilot, OpenAI Codex and Claude for faster code generation, refactoring, debugging and documentation.

Associate Software Engineer — Decimal Technologies Pvt Ltd *June 2021 – December 2025*

- Engineered real-time analytics dashboards for 5+ banking clients using Angular and PrimeNG, visualising live transaction data via interactive charts and sortable data tables — directly improving decision-making speed for business stakeholders.
- Implemented end-to-end eKYC and vKYC onboarding workflows integrated with UIDAI Aadhaar APIs, enabling fully paperless digital identity verification and reducing average customer onboarding time by eliminating manual documentation steps.
- Drove Agile delivery as an active Scrum team member — managed sprint planning, task tracking, and release documentation in Jira and Confluence, consistently meeting 2-week sprint commitments across cross-functional teams (backend, QA, product).
- Accelerated development velocity by integrating GitHub Copilot and AI-assisted tooling (ChatGPT, Cursor) into daily workflows — reducing repetitive boilerplate, improving TypeScript code quality, and resolving complex async debugging challenges faster.

KEY PROJECTS

HRMS – Human Resource Management System (IoT India)

Tech Stack: *Next.js, Node.js, Express, PostgreSQL, Prisma ORM, Redis, pgAdmin, JWT, Git, Slack*

- Built employee onboarding, profile management, attendance, leave approval and payroll modules from a single dashboard.
- Created role-based views for HR, managers and employees, with approval workflows and email notifications.
- Developed REST APIs in Node.js with Prisma ORM over a normalised PostgreSQL database for reliable HR records.
- Added Redis-based rate limiting to secure API endpoints against abuse and excessive requests.

Logistics Management System (IoT India)

Tech Stack: *Next.js, Node.js, Express, PostgreSQL, Prisma ORM, Redis, pgAdmin, REST APIs, Git*

- Developed order, shipment and dispatch management with live status tracking (Booked → In Transit → Delivered).
- Built vehicle and driver assignment screens and operations dashboards for delivery performance.
- Designed responsive, mobile-friendly screens so field and office teams can update shipments from any device.
- Used Prisma ORM for type-safe database access and migrations, with Redis rate limiting on the APIs.
- Built a wallet module with balance management, credit/debit transactions and transaction history.

Current Account – Sole Proprietorship & Individual Journey (Decimal Technologies)

Tech Stack: *Angular, TypeScript, PrimeNG, UIDAI API, eKYC, vKYC, Payment Gateway, REST APIs*

- Built an end-to-end current account opening platform for one of India's fastest-growing private banks, supporting thousands of daily applications with a high-availability, zero-downtime architecture.
- Implemented multi-step eKYC and vKYC onboarding flows with real-time Aadhaar OTP verification, face-match liveness checks, and document upload — fully replacing manual branch processes.
- Integrated a secure payment gateway module handling minimum balance collection and initial deposit transactions, with retry logic and failure-state UX to minimise user drop-offs.

Open Saving Account Platform (Decimal Technologies)

Tech Stack: *Angular, TypeScript, Angular Material, PAN Validation API, Aadhaar API, vKYC, REST APIs*

- Built a savings account onboarding platform for a leading national bank, digitising the complete customer acquisition funnel from lead capture through to account activation.
- Integrated PAN and Aadhaar validation APIs for KYC compliance, reducing fraudulent applications and ensuring data accuracy at the point of entry.
- Implemented vKYC video-based remote identity verification, allowing customers to complete verification from home and cutting physical branch visit volume substantially.

Bank Leads Management System (Decimal Technologies)

Tech Stack: *Angular, TypeScript, PrimeNG, REST APIs, Role-based Access Control (RBAC)*

- Developed a full-featured lead management platform enabling sales teams to capture, assign, track, and close bank product leads from a centralised dashboard.
- Implemented role-based access control (RBAC) with distinct views and permissions for branch managers, sales executives, and administrators.
- Built a lead status pipeline (New → In Progress → Converted / Lost) with follow-up scheduling and automated reminder alerts for overdue leads.

EDUCATION

Master of Computer Applications (MCA) *2018 – 2021*
Dr. APJ Abdul Kalam Technical University, Lucknow

Bachelor of Computer Applications (BCA) *2015 – 2018*
Chaudhary Charan Singh University, Meerut
